SUMMARY

Detail-oriented computer science and business systems student skilled in developing full-stack applications using React, TypeScript, Tailwind, and back-end services with FastAPI or Node.js. Contributed to two live products and participated in multiple hackathons, while authoring an IEEE-style research paper. Seeking entry-level roles to leverage front-end development skills.

SKILLS

- Frontend development: React and JavaScript
- Component architecture and CSS3
- Responsive UI and Tailwind CSS
- Three.js and GSAP animation
- API integration
- Database management
- Data visualization
- Version control: Git and GitHub
- Analytical problem solving
- User research
- Project coordination
- Machine learning basics

Ugesh Kumar

EDUCATION

Expected in April 2029

B.Tech | Computer Science and Business Systems (in association with TCS)
Jain University, Faculty of Engineering and Technology (FET), Bengaluru, Karnataka

- Currently in Semester 3
- GPA: 9.09 (Semester 1), 9.24 (Semester 2)

PERSONAL INFORMATION

Title: Software Engineer Intern

CERTIFICATIONS

- What Is Generative AI?
- 2026-08 LinkedIn Learning
- AI Fluency: Framework and Foundations
- 2026-01 Anthropic
- Coding Foundations
- 2025-07 SoloLearn

PROJECTS

- Job Search Momentum, Built a drag-and-drop Kanban board with a visual stage timeline so applications keep moving from saved to offer., Added 3D career graphics with Three.js and a job-description analyzer that links a user's technical skills to their portfolio code., Deployed the app on Vercel with a PostgreSQL back end.
- CiteCheck AI, Built a tool that checks marketing drafts against brand guidelines and flags a conflict only when it can quote the exact approved source, so AI suggests and humans decide., Built the API with FastAPI and SQLModel and covered it with 117 automated tests.
- MemGuard AI, Designed an audit workflow for fine-tuned models: register a model, generate extraction probes, detect leakage (exact match, semantic similarity, PII) and score risk from Low to Critical with remediation steps., Built and deployed the audit dashboard for hackathon judges.
- ECG Signal Processing and Arrhythmia Detection, Worked in a team to build an ML pipeline for arrhythmia detection from ECG signals, with a deployed web interface to present the results to faculty.

PUBLICATIONS

- Student Performance Prediction using Machine Learning and Explainable AI
- Predicted student outcomes on the OULAD dataset with ML models and used explainable AI to show which factors drive each prediction.
